## **Drought Information System was approved on the line of Regional Public Goods of the Inter-American Development Bank**

The project "Design and Initial Implementation of Drought Information System for Southern South America " - SISSA has been approved to be funded with Regional Public Assets of the Inter-American Development Bank.

A drought information system for the South of South America (SSA) is proposed with two main objectives: (1) to contribute on reduction of the economic, social and environmental impacts of droughts on agricultural production and hydroelectric generation (our initial thematic focuses) and on SSA communities, and (2) to improve the governance of risk management associated with droughts, contributing to the collaborative development of national policies preparedness and responses.

The project documents are available at the following link:
